Senior Software Engineer - Frontend

I'm an engineer with 11 years of experience in Typescript, React, and most other web technologies. Most recently, I led many front-end initiatives at Aptos Labs, connecting users to its L1 blockchain via beautiful UI. I've done a lot to make dev cycles faster, increase traffic, and improve code quality. I travel at startup velocity, so I learn quickly and pivot quickly.

WORK EXPERIENCE

Aptos Labs   New York, NY • Oct 2023 - Jan 2025
Senior Frontend Engineer

- Increased engagement of the developer education platform by 40% in 3 months by re-architecting the frontend (React + Next.js), creating a beautiful interface while allowing members of the Aptos ecosystem to contribute code examples, tutorials, and articles
- Led frontend efforts in high-visibility proof-of-contept projects, like an on-chain elimination tournament and games like trivia and rock paper scissors, with thousands playing and engaging on socials
- Maintained and developed the developer documentation (aptos.dev), managing issues and PRs, adding features, and coordinating with domain experts for updates/reviews. Reduced cycle time from user request to new feature and raised developer satisfaction
- Developed the frontend of Aptos Build, bringing new UIs, charts, and tools to dApp builders, helping them manage keys, meter access, track usage, and build custom indexers for smart contract data

Genesis Global Trading   New York, NY • Jun 2022 - Aug 2023
Frontend Engineer

- Led frontend efforts across 4 scrum teams to develop the UI for the flagship crypto trading platform and several supporting applications (Typescript with Vue.js and React). Also assisted in Python Django backend.
- Took charge in a push to improve standards across the frontend guild, including a move to test-driven development (with Jest and React Testing Library), continuous integration pipelines, and using React for all new apps.
- Developed the UI of a compliance-mandated comms tracking app (React with ViteJS), leading to on-time release and 100% employee compliance, helping us register as a swap dealer and unlock new business.

- Took on design efforts due to demands and staff limitations, creating a material design-inspired system to enforce style across the tech org and reduce cost of UI development. Led to 15% reduced dev time in 1 year.

Reonomy   **New York, NY • Nov 2019 – Apr 2022**
Senior Software Engineer

- Developed the UI of a consumer web app (Typescript/React/Redux). Worked across 2 scrum teams to meet always-evolving requirements, resulting in a promotion within 1 year and company-wide recognition.
- Ran frontend guild-wide initiatives like redoing state management across entire app and implementing a design system (with importable components), leading to happier developers.

Lab49   **New York, NY • Jun 2018 – Oct 2019**
Software Engineer

- Deployed as a frontend expert to a large banking client. Developed the interface (React/Redux) to a cross-team data management tool, leading to more business and better reputation.
- Improved my Java and Python knowledge and helped with the overloaded backend team to help get the project done on time. Led to no-longer-upset clients and an averted crisis.

WGSN   **New York, NY • Jan 2014 – Jun 2018**
Software Engineer

- Developed the UI for a dashboard that tracked clothing inventories and prices over time and by attribute; designed/implemented charts and tables, as well as a rich filtering system. Led to 25% customer growth within 1 year.
- Modernized legacy applications (Wordpress, Backbone.js) into AngularJS for a post-merger rebranding and re-architecture; led to higher customer satisfaction and reduced dev time.

EDUCATION

B.S. Computer Science And B.A. Economics

Pace University • GPA: 3.89   Sep 2007 - May 2011

SKILLS

Angular, D3, Data Visualization, Java, JavaScript, MongoDB, Move, MySQL, Next.js, PostgreSQL, Python, React, Redux, Selenium, TDD/BDD, Technical Writing, TypeScript, Unit Testing, Vue.js, WordPress
